Conclusion

Conclusion

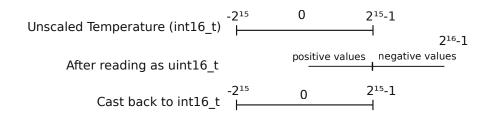

Structure

Casting Data

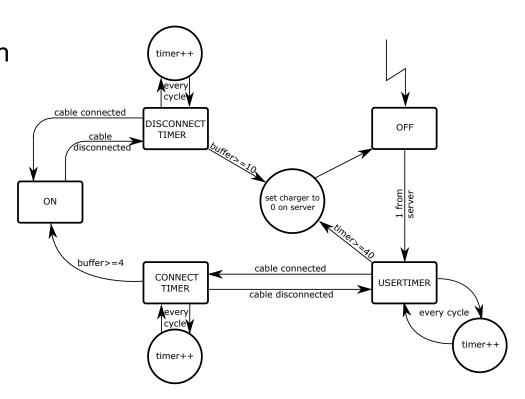

- Some registers contain signed values
- Modbus function stores the result as uint16_t
- Use casting to obtain the true value

Charger Control

- Only switched on when a cable is connected
- Implemented as FSM
- Different behavior during internet failure

Supportive Work

- Remote desktop
- Booting scripts
- Installation manual

Future Work

- Already done
 - Dynamic USB allocation
 - Local display
 - Motion-controlled LEDs
 - Cycle timing
- Future work
 - E-bike battery voltage
 - Failures of the weather station/temperature probes

Conclusion

- Data acquisition
- Control for the chargers
- Local display
- No memory leaks
- Stable/robust code
- Proof-of-concept motion-controlled LEDs
